### **Preface**

Commercial Accommodation Monitor: August 2019 – Clutha presents comprehensive and impartial information on short-term commercial accommodation for the Clutha Regional Tourism Organisation (RTO) area, from the Accommodation Survey. This survey is run by Stats NZ on behalf of the Ministry of Business, Innovation & Employment.

The data relates to the areas covered by the following local authority:

• Clutha District

Comparisons of monthly data with the same month of the previous year need to be treated with caution, as data for one period may be influenced by events for which there is no equivalent in the previous period (eg Chinese New Year, Easter).

More data and commentary is available on the Stats NZ website (www.stats.govt.nz).

The September 2019 monitor will be released on 14 November 2019.

Liz MacPherson

Government Statistician

### Standards and further information

### Percentage changes

Percentage movements are, in a number of cases, calculated using data of greater precision than that published. This could result in slight variations.

### Rounding procedures

On occasion, figures are rounded to the nearest thousand or some other convenient unit. This may result in a total disagreeing slightly with the total of the individual items as shown in tables. Where figures are rounded the unit is in general expressed in words below the table headings, but where space does not allow this the unit may be shown as (000) for thousands, etc.

#### Source

All data is compiled by Stats NZ, except where otherwise stated. Both administrative and survey data has been used in this report.

### Liability

While all care and diligence has been used in processing, analysing and extracting data and information in this report, Stats NZ gives no warranty it is error free and will not be liable for any loss or damage suffered as a result of the use, directly or indirectly, of information in this report.

## 1 Highlights

## Monthly highlights

In August 2019 compared with August 2018:

- Guest nights fell 19.6 percent to 3,900
- International guest nights rose 10.8 percent to 1,004
- Domestic guest nights fell 26.6 percent to 2,896
- The average length of stay fell from 2.44 nights to 1.65 nights
- The overall occupancy rate fell from 23.2 percent to 12.8 percent
- Accommodation capacity, excluding holiday parks, rose 2.3 percent.

### Response rates for August 2019

The response rate for the Clutha RTO area was 77 percent for August 2019. The proportion of the origin-of-guest estimate from unadjusted data was 55 percent.

<sup>(1)</sup> Reclassifications, new businesses, ceased businesses, and temporary closures may affect figures.

#### Symbol:

C confidential

<sup>(2)</sup> Irregular events, such as airshows and Easter, may affect percentage changes and other figures.

<sup>(3)</sup> Occupancy rates are calculated as the ratio of used stay-unit nights to available stay-unit nights.

<sup>(4)</sup> Holiday parks often have high capacity and can mislead when included in total occupancy rates.

<sup>(5)</sup> Average length of stay is calculated as the ratio of guest nights to guest arrivals.

<sup>(6)</sup> Capacity is calculated as the number of available stay-units multiplied by the number of days in the month.

## 3 Origin of guests

In August 2019, international guests accounted for 25.7 percent of all guest nights in the Clutha RTO area. When compared with August 2018, the number of international guest nights spent in the area in August 2019 was up 10.8 percent to 1,004. Domestic guest nights decreased 26.6 percent, to 2,896, for the same period.

The proportion of the origin-of-guest estimate from actual data was 55 percent for August 2019.

### 4 National results

In August 2019, a total of 2,617,000 guest nights were spent in short-term commercial accommodation in New Zealand, an increase of 93,000 nights (3.7 percent) from August 2018. Both the North Island (up 66,000 or 4.3 percent) and South Island (up 27,000 or 2.8 percent) recorded an increase.

All four accommodation types recorded an increase in guest nights in August 2019, compared with August 2018. Hotels had the largest increase in guest nights (up 42,000 or 3.9 percent), followed by motels (up 22,000 or 2.5 percent), backpackers (up 19,000 or 6.4 percent), and holiday parks (up 10,000 or 3.4 percent).

<sup>(1)</sup> Occupancy rates are calculated as the ratio of stay unit nights to monthly capacity.

#### Symbols:

C confidential

... not applicable

<sup>(2)</sup> Occupancy rates excluding holiday parks are included because the capacity of holiday parks can distort the total occupancy rates.

## 6 Accommodation Survey technical notes

#### Data source

We collect data from accommodation providers or their representatives each month, mostly via a postal survey.

#### Coverage

The Accommodation Survey covers most short-term commercial accommodation in New Zealand.

The target population for this survey is all accommodation providers with the following characteristics:

- operating on a commercial basis
- providing mainly short-term (less than one month) accommodation
- economically significant (generally meaning being GST-registered and having a turnover of at least \$30,000 per year)
- included in class 4400 (accommodation) or class 4520 (pubs, taverns, and bars) in ANZSICO6 (Australian and New Zealand Standard Industrial Classification 2006)
- classified to 'hotels', 'motels', 'backpacker accommodation', or 'holiday parks'.

#### Excluded:

- hosted accommodation (such as 'bed & breakfast' establishments)
- marine vessels (such as cruise ships)
- private dwellings
- tramping huts (non-commercial)
- event-specific accommodation (such as temporary campervan parks)
- businesses that cease operation or no longer provide short-term commercial accommodation
- businesses that temporarily shut down (eg for renovations) we remove them from the survey until they re-open.

### Accommodation type classification

The predominant capacity provided by a business determines the accommodation type. For instance, if the business provides both motel and camping ground accommodation, but the majority of its stay units are motel rooms, then we classify it as a motel. We use the New Zealand Accommodation Classification, broadly defined below:

- hotels (including resorts)
- motels (including motor inns and serviced apartments)
- backpacker accommodation (including short-stay hostels)
- holiday parks (including caravan parks and camping grounds).

### Confidentiality

'C' symbols are used in the tables where information has been suppressed. We do not release data from individual businesses.

### Changes to survey content

Establishments may change the way they operate over time. If they do, they may be reclassified from one accommodation type to another. For example, if a holiday park adds sufficient motel units that it is operating more as a motel than a holiday park, it will be subject to reclassification to the 'motels' accommodation type. This type of change will tend to reduce surveyed guest nights and other figures for holiday parks (because there would be one fewer holiday park) while boosting guest nights and other figures for motels (because there would be one more motel).

Guest night and other movements, where the latest month is compared with the same month of the previous year, are affected for 12 months from the time that any reclassification is done. After 12 months, the reclassified establishment will appear in the same accommodation type in both comparison months.

Reclassifications of establishments are not the only changes that affect survey content and figures for the Accommodation Survey:

- When establishments temporarily cease operations, we take them out of the survey until they re-open. These changes affect figures for the number of establishments and available capacity.
- Businesses that start up, shut down, or move into or out of the short-term commercial accommodation industry also affect survey figures.

#### Survey errors

This survey aims for 100 percent coverage of the accommodation businesses in New Zealand (a full census). However, in practice, the overall response rate is usually between 76 and 80 percent. We estimate values for the remaining units based on the characteristics of similar establishments in the same or similar regions. This introduces unknown errors into the estimates, and users of the data should bear this in mind. The size of these unknown errors is difficult to quantify.

Other errors include respondent error, and errors in coverage, classification, and processing. Our editing processes identify and remove many errors, but some will likely remain. We cannot quantify the effect of the remaining errors.

### Comparability

Accommodation Survey statistics are not always on the same basis as statistics from other sources. For example, 'average length of stay' in the Accommodation Survey is for all guests (domestic plus international), but in the International Visitor Arrivals to New Zealand reports, it is only for international guests.

#### More information

For further information on the Accommodation Survey, refer to webpage https://www.stats.govt.nz/topics/accommodation
