DISCLAIMER

GENERAL
The terms of this disclaimer (hereinafter referred to as ‘Disclaimer’) apply to this document, entitled ‘Opportunities in the New Zealand Blueberry Industry’ (the Coriolis Report) and any later versions of this document. Please read this Disclaimer carefully. By accessing this document you agree to be bound by this Disclaimer.

USE OF THIS DOCUMENT
This document was prepared by Coriolis Ltd. (Coriolis) for our client and is based on information from a wide range of public sources deemed to be reliable and interviews with industry participants. Analyses and projections represent Coriolis’ judgment, based on the data sources cited and are subject to the validity of the assumptions noted in this document. For purposes of the analysis in this document, Coriolis has relied upon and considered accurate and complete, and at the time of initial issuance of this document is not aware of any error in, data obtained from the sources cited but has not independently verified the completeness or accuracy of the data. All estimates and projections contained in this document are based on data obtained from the sources cited and involve elements of subjective judgment and analysis.

EXCLUSION OF LIABILITY
Neither Coriolis nor any of its agents or subcontractors shall be liable for any direct, indirect, special, incidental, consequential, punitive, or exemplary damages, including lost profits arising in any way from, including but not limited to, (i) the information provided in this document and any Coriolis Commentary, and (ii) claims of third parties in connection with the use of this document. Projected market information, analyses and conclusions contained herein are based (unless sourced otherwise) on the information described above and on Coriolis’ judgment, and should not be construed as definitive forecasts or guarantees of future performance or results. Neither Coriolis nor its officers, directors, shareholders, employees or agents accept any responsibility or liability with respect to this document.

Coriolis wishes to draw your attention to the following limitations of the Coriolis Report including any accompanying presentation, appendices and commentary (the Coriolis Commentary):

a. Coriolis has not been asked to independently verify or audit the information or material provided to it by, or on behalf of the Client, or any of the parties involved in the project;

b. the information contained in the Coriolis Report and any Coriolis Commentary has been compiled from information and material supplied by third party sources and publicly available information which may (in part) be inaccurate or incomplete;

c. Coriolis makes no representation, warranty or guarantee, whether express or implied, as to the quality, accuracy, reliability, currency or completeness of the information provided in the Coriolis Report and any Coriolis Commentary, or that reasonable care has been taken in compiling or preparing them;

d. the analysis contained in the Coriolis Report and any Coriolis Commentary are subject to the key assumptions, further qualifications and limitations included in the Coriolis Report and Coriolis Commentary, and are subject to significant uncertainties and contingencies, some of which, if not all, are outside the control of Coriolis; and

e. any Coriolis Commentary accompanying the Coriolis Report is an integral part of interpreting the Coriolis Report. Consideration of the Coriolis Report will be incomplete if it is reviewed in the absence of the Coriolis Commentary and Coriolis conclusions may be misinterpreted if the Coriolis Report is reviewed in absence of the Coriolis Commentary.

Coriolis is not responsible or liable in any way for any loss or damage incurred by any person or entity relying on the information in, and the Recipient unconditionally and irrevocably releases Coriolis from liability for loss or damage of any kind whatsoever arising from, the Coriolis Report or Coriolis Commentary including without limitation judgments, opinions, hypothesis, views, forecasts or any other outputs therein and any interpretation, opinion or conclusion that the Recipient may form as a result of examining the Coriolis Report or Coriolis Commentary.

The Coriolis Report and any Coriolis Commentary may not be relied upon by the Recipient, and any use of, or reliance on that material is entirely at their own risk. Coriolis shall have no liability for any loss or damage arising out of any such use.

STEERING & GUIDANCE
This project would not have been possible without the strong guidance of our Steering Committee. In particular, we would like to thank Andrew McCallum of MBIE for his tireless energy in keeping this project on track, while at the same time pushing us forward.

Draft versions of this report, including the firm profiles, were distributed to those firms for comment, addition or correction. This was done in the form of emails and phone calls. We thank those that helped us in this process for their time and effort. We also thank those that provided them for their photos.

We are grateful for all of the input we have received, but the report is ours and any errors are our own.

Finally, we acknowledge the support of the Ministry of Business, Innovation and Employment (MBIE), New Zealand Trade and Enterprise (NZTE) and the Ministry for Primary Industries (MPI). It is their funding that has made this report possible.

LIMITATIONS
This work is based on secondary market research, analysis of information available (e.g. Statistics NZ), and a range of interviews with industry participants and industry experts. Coriolis have not independently verified this information and make no representation or warranty, express or implied, that such information is accurate or complete. In many cases regional data is incomplete or not available and therefore research includes significant modelling and estimates.

All cross-country international trade data analysed in this report is calculated and displayed in US$. This is done for a range of reasons:

- It is the currency most used in international trade
- It allows for cross country comparisons (e.g. vs. Denmark)
- It removes the impact of NZD exchange rate variability
- It is more comprehensible to non-NZ audiences (e.g. foreign investors)
- It is the currency in which the United Nations collects and tabulates global trade data

KEY CONTACTS FOR THIS REPORT
Virginia Wilkinson is a Director at Coriolis. Virginia is Coriolis’ resident expert on consumer insights and market research. She has over fifteen years of experience in primary sector and food and fast moving consumer goods research. Virginia regularly conducts both primary and secondary research on food, fast moving consumer goods, retailing and foodservice across Australasia. You may contact her by e-mail on: v.willkinson@coriolisresearch.com

Tim Morris is a Director at Coriolis and is recognised as a leading export and advisor to CEOs and stakeholders in strategy in food, fast moving consumer goods and retailing. Tim is a recognised expert globally in retailing, particularly in private label, with his work being quoted in numerous publications and college textbooks. He is head of Coriolis’ retail and consumer goods practice. You may contact him by email on: tmorris@coriolisresearch.com

If at any point you are unclear where a number came from or how a conclusion was derived, please contact the authors directly. We are always happy to discuss our work with interested parties.

COPYRIGHT
All photos used in this discussion document were either sourced by Coriolis from The New Zealand Story, a range of stock photography providers as documented or are low resolution, complete product/brand for illustrative purposes used under fair dealing/fair use for both ‘research and study’ and ‘review and criticism’. Our usage of them complies with New Zealand law or their various license agreements.

Other than where we use or cite the work of others, this work is licensed under the Creative Commons Attribution 3.0 New Zealand licence. In essence, you are free to copy, distribute and adapt the work, as long as you attribute the work and abide by the other licence terms.

EXECUTIVE SUMMARY 01

This report “Opportunities in the New Zealand Blueberry Industry,” was commissioned by MBIE as part of the Food and Beverage Information Project. Blueberries were identified as a growth sector in the related “Emerging Growth Opportunities” report. Blueberries emerged as a high growth sector for New Zealand that has grown on the back of growing global demand for this small, healthy fruit.

WHAT ARE BLUEBERRIES?

Blueberries, along with kiwifruit and avocados, are one of the few major fruit domesticated in the 20th Century. Vacinnium is the family of all “blueberries” and includes more than 450 plants in the wider family, including Blueberries, Bilberries, Cranberries, and Lingonberries.

“Blueberries” are native to North America and were collected from the wild there by residents for centuries. The blueberry was domesticated in New Jersey by farmer Elizabeth White and USDA botanist Frederick Coville between “around 1900” and 1916. From there the domesticated blueberry has spread across North and South America, Europe, Australia and New Zealand.

Additional varieties, bred from “lowbush” and “rabbiteye” varieties, have been developed that tolerate more varied climates.

BLUEBERRIES IN NEW ZEALAND

The NZ Department of Agriculture introduced blueberries to New Zealand from the US in 1950 to provide a suitable crop on the acid peatlands of Waikato. This area remains the centre of blueberry production today. In the 1970s improved varieties were imported from the United States. Since then, further introductions have occurred and New Zealand’s capable fruit breeders – at Plant & Food Research and elsewhere – have developed further improved varieties with superior characteristics.

At the same time, global demand for blueberries is growing driven by clear research on their great taste, their health giving properties and their status as one of a handful of “superfruit” known to consumers.

As a result, New Zealand today has a large and vibrant blueberry industry with 640 hectares of fruit (and growing) creating $62m in total industry revenue, including $39m in exports.

The Bay of Plenty, Hawke’s Bay and Waikato are today the primary growing regions, with firm growth and investment in Northland and the South Island.

This research seeks to support the continued growth of this exciting and vibrant industry.

POTENTIAL INVESTMENT THEMES

Four broad investment themes exist for driving export growth in the New Zealand blueberry industry.

1. First, there are opportunities to grow blueberry production.
2. Second, the supply chain can be improved to increase efficiency.
3. Third, the marketing of New Zealand blueberries can be improved.
EXECUTIVE SUMMARY

4. Finally, there are opportunities to create value-added products. Blueberries are an extensible platform.

NEW ZEALAND SITUATION

New Zealand blueberry production is a function of area and yield. The amount of area in blueberries in New Zealand has shown solid area growth since the late 90’s while at the same time yields have been relatively stable for the past decade at around 4-5 t/ha. As a result, New Zealand blueberry production has been growing since 1997.

At the same time, the number of commercial growers has been declining over the past decade, as the industry consolidates into fewer, larger units. Growing production across declining grower numbers has led to strong increases in average tonnes produced per grower.

KEY MARKETS

Following harvest, blueberries travel to the consumer through various channels (fresh, frozen or further processed). The total New Zealand blueberry industry, including frozen imports, has an estimated revenue of NZ$70-80m. The New Zealand blueberry industry needs different strategic priorities for each key market segment.

DOMESTIC MARKET

First, there are continued opportunities for growth in the New Zealand domestic market. Domestic fresh demand appears relatively stable (~1,600t) and exports are absorbing production growth. New Zealanders are consuming more blueberries, but demand growth is coming from imported frozen fruit. With relatively flat domestic demand for fresh blueberries, New Zealand needs to look to exports for growth.

EXPORT MARKETS

Second, there are continued opportunities for growth in export markets. New Zealand blueberry export volumes are highly seasonal. Export seasonality has shifted away from predominantly Dec/Jan to predominantly Feb/Mar. New Zealand’s market share varies significantly by market; it is high in Oceania, reasonable in parts of South East Asia (SEA) and low elsewhere. New Zealand is currently big in small markets and small in big markets.

AUSTRALIA

There are continued opportunities for growth in the Australian market. New Zealand blueberry exports have shown strong growth over the past two decades driven by demand from Australia. New Zealand is effectively the only blueberry supplier currently able to penetrate Australian biosecurity.

New Zealand blueberry exports supply the Australian market counter-seasonally to New South Wales (NSW), but at a similar time to other states. NSW (74%) is the largest blueberry producing region in Australasia, followed by New Zealand (15%).

Australian imports of New Zealand blueberries are growing faster (23%) than domestic Australian production (14%).
EXECUTIVE SUMMARY 03

EAST & SE ASIA

There are opportunities for growth in select East and South East Asian markets. New Zealand’s blueberry exports are currently modest beyond Australia and now predominantly go to East/South East Asia.

In many export markets, New Zealand’s blueberry exports appear to go through a “boom-and-bust” cycle. In “in-and-out” markets, key competitors such as Chile, Peru and Mexico have achieved growth, while New Zealand has not. The challenge in “in-and-out” markets is the high current landed price of New Zealand blueberries (+50%). Three markets – Thailand, Vietnam and Taiwan – stand out for creating solid growth to date. However, even in these growth markets, New Zealand is under pressure from low cost suppliers. New Zealand’s opportunity is to gain attractive market access to China (on the priority list since 2017)

COMPETITIVE SITUATION

Global situation: the global market for blueberry imports is dominated by North America and Europe, with China as a major growth region. Global blueberry exports are growing (20y CAGR 18%), driven in particular by Chile and Peru.

Peru – a country that has grown rapidly over the past decade to become the largest blueberry exporter in the world – has clear lessons for New Zealand. Six major factors are driving Peru’s strong growth in blueberries (massive irrigation projects, large firms, efficient post harvest, best global genetics, latest planting systems and high yields).

Chile is another growing producer and exporter that has put pressure on New Zealand in many Asian blueberry markets.

FIRM ACTIVITY

As the industry develops firms are integrating across and between the supply chain. Firms are investing in the growth of new farming systems, area and genetics. Large firms like T&G are developing blueberries as a strategic category.

POSITIVE FUTURE

Blueberries are still a young industry, both globally and in New Zealand. To date, New Zealand has achieved success primarily in the domestic market and in Australia, both markets insulated from global pressures by biosecurity. Going forward, the New Zealand blueberry industry needs to transition from this “Walled Garden” into the fast growing, but more competitive markets of East and South East Asia if growth is to continue.

The proven success of New Zealand apples and kiwifruit in highly competitive global markets shows what is possible. New Zealand growers have the skills and resources required to make the required transition and continue to grow.
Why did the New Zealand government undertake the Food and Beverage Information Project?

WHAT IS THE PURPOSE OF THE FOOD AND BEVERAGE INFORMATION PROJECT?

The project pulls together the available information on the food and beverage industry into one place, in a form which is familiar and useful to business. The reports contain analysis and interpretation of trends and opportunities to materially assist with business strategy and government policy.

The information will be of vital use to businesses, investors, government, and research institutions as the industry expands and diversifies. This industry view will be very useful to government, enabling better dialogue and the opportunity to address issues collectively.

WHAT BENEFIT WILL THIS BRING TO BUSINESSES?

The Project will have many uses for businesses. These include:

- As a base of market intelligence to enable business to be much more targeted in their own market research
- Reviewing and informing offshore market development (including export and investment) strategies
- Assisting in identifying areas of innovation and R&D for the future
- Identifying strategic partners and collaborators
- Enabling a company to benchmark performance with that of its competitors
- Monitoring industry activity
- Gaining a better understanding of their own industry sector
- Identifying internal capability needs or external inputs

HOW WILL GOVERNMENT USE THE REPORTS?

This information will provide much greater insight into the industry, which is useful for a range of policy developments, from regulatory frameworks to investment in science and skills and facilitating access to international markets. In particular, a single source of factual information will enable government agencies to better coordinate their efforts across the system and be more responsive to addressing industry issues. The government can now understand what’s what, and also, who’s who.
The Emerging Growth Opportunities (EGO) research is part of the wider New Zealand Food and Beverage Information Project.
Blueberries emerged in a multi-stage screen designed to identify high potential food and beverage export opportunities

1. Short list was revised by project steering group to include blueberries [HS081040] (was initially breakfast cereal & muesli bars [HS190410]); see page 28 of above linked document for details

Globally, blueberries consumption is increasing

“New Zealander’s growing love for blueberries is seeing rapid expansion in the industry. A record seven million punnets of fresh locally-grown blueberries were consumed last season and that’s expected to be topped this summer as the main season gets underway. Latest supermarket sales data shows Kiwis bought an extra one million punnets of blueberries (18.3 percent more) last summer compared to the year before, with total sales now exceeding $25 million.”

“Consumer demand for blueberries has skyrocketed. According to USDA research, per capita, blueberry consumption in the United States grew more than 600 percent in the past 20 years. Blueberries have become a staple for many. In fact, they’re the top berry among American consumers. A staggering 75 percent of consumers are likely to purchase blueberries in the next 12 months, a 10 percent increase from 2013.”

“New Zealanders are now more aware of the extraordinary health benefits so they’re choosing to eat blueberries in greater quantities than ever before.”

“We’re thrilled that a growing number of New Zealanders are recognising the health benefits and incorporating fresh blueberries into their diets,” Dan [Peach, BBNZ Chair] says. “They’re an easy way to improve your mood and the bottom line is they taste delicious.”

“Blueberries continue to grow in popularity. Since May last year, over £400m worth of British blueberries were sold in the UK with shoppers spending 10.5 percent more on the health-boosting berry than in the previous year. In total, 41,000 tonnes of blueberries were sold in the 52 weeks (the equivalent weight of 6,500 elephants), an increase of 10 per cent compared to the 52 weeks up to 14th July 2018.”

“Blueberries have become a staple for many. In fact, they’re the top berry among American consumers. A staggering 75 percent of consumers are likely to purchase blueberries in the next 12 months, a 10 percent increase from 2013.”
Increased consumption is driven by science

“The effect of flavonoid-rich food, such as blueberries, on cognitive function has been subject to a growing amount of research interest in recent years. Epidemiological, prospective, preclinical, and clinical trials have revealed positive cognitive benefits from flavonoid interventions, particularly in relation to the amelioration of cognitive decline in older adults”.

“Blueberries are rich in polyphenols that may be beneficial to cognitive performance and mood… Eight studies reported blueberry consumption or supplementation… to improve measures of cognitive performance, particularly short- and long-term memory and spatial memory…Based on the current evidence, blueberries may improve some measures of cognitive performance.”

“The blueberry, already labeled a ‘super fruit’ for its power to potentially lower the risk of heart disease and cancer, also could be another weapon in the war against Alzheimer’s disease. New research being presented today further bolsters this idea, which is being tested by many teams. The fruit is loaded with healthful antioxidants, and these substances could help prevent the devastating effects of this increasingly common form of dementia, scientists report.”

“Awareness of the human health benefits of blueberries is underpinned by a growing body of positive scientific evidence…Blueberries contain a large number of phytochemicals, including abundant anthocyanin pigments… Epidemiological studies associate regular, moderate intake of blueberries and/or anthocyanins with reduced risk of cardiovascular disease, death, and type 2 diabetes, and with improved weight maintenance and neuroprotection.”
New Zealand’s success in blueberries has three key drivers

IDEAL CLIMATE & SOILS
- Low production cost
  - Temperate climate similar to Washington, Oregon, Italy and France
  - Temperature extremes moderated by surrounding ocean
  - Isolated location protected by natural barriers
  - Further land potentially available for expansion

EFFICIENT PEOPLE & SYSTEMS
- Trusted by consumers
  - Long history of fruit growing and breeding
  - Industry is focused on export markets
  - Pool of skilled orchard operators and managers
  - Strong systems and support networks
  - Advanced capabilities in packhouse systems

LOCATION & MARKETS
- High share in key products
  - Free trade agreement with Australia (CER*)
  - Close proximity to Australia and Asia
  - Excellent market access across Asia
  - NZ was the first developed country to sign a free trade deal with China (2008)
  - Seasonal window into Australia (when NSW is not producing)

* Closer Economic Relationship; Source: photo credit (purchased or creative commons (Dollar Photo Club; freenzphotos.com), Compac)
New Zealand has a strong position in Australia, but this cannot be taken for granted and success elsewhere is challenging

<table>
<thead>
<tr>
<th>STRENGTHS</th>
<th>WEAKNESSES</th>
</tr>
</thead>
<tbody>
<tr>
<td>- New Zealand track record of success in new fruit development (e.g. kiwifruit) and in breeding of new cultivars (e.g. Zespri Gold)</td>
<td>- Lack of large supply of “guest workers” like some countries; seasonal labour shortages, accommodation shortages</td>
</tr>
<tr>
<td>- Strong plant science capabilities at Plant &amp; Food Research and elsewhere</td>
<td>- Limited and expensive air freight availability</td>
</tr>
<tr>
<td>- Counter seasonal to Northern Hemisphere in a narrow climatic window only shared by four competitors (Chile, Argentina, South Africa and Australia)</td>
<td>- Australian market access challenging for organics due to strict phytosanitary requirements</td>
</tr>
<tr>
<td>- Proximity to bio-secure Australia and fast growing Asian markets</td>
<td>- Too much area still in low yield varieties and older planting systems (low average yields)</td>
</tr>
<tr>
<td>- Strong biosecurity; free from many diseases and pests</td>
<td>- Higher cost structure than others in seasonal window (e.g. Chile)</td>
</tr>
<tr>
<td>- Good phyto-agreements with key markets</td>
<td>- Lack of compelling New Zealand IP-Controlled blueberry varieties differentiated to the consumer (where is the NZ blueberry version of Enza Jazz or Zespri Sungold?)</td>
</tr>
<tr>
<td>- Unsubsidised industry competing successfully in world markets</td>
<td>- Limited access to new plant varieties, quarantine lengthy and expensive, limited space</td>
</tr>
<tr>
<td>- Industry consolidating into fewer, larger operations at scale</td>
<td>- Many smaller orchards and farms; benchmarking suggests fewer, larger farms preferable</td>
</tr>
<tr>
<td>- Transition to integrated grower/packer/shipper model underway</td>
<td>- Low overall yields compared with competition</td>
</tr>
<tr>
<td>- Supportive industry structure</td>
<td>- New cultivar development funding model needs improvement, lack of support by growers</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>ISSUES/THREATS/RISKS</th>
</tr>
</thead>
<tbody>
<tr>
<td>- Continued strong biosecurity in Australia</td>
</tr>
<tr>
<td>- Continued growth of middle-class in Asia</td>
</tr>
<tr>
<td>- Aging baby boomers focusing on positive living &amp; eating for illness prevention</td>
</tr>
<tr>
<td>- Continued work on FTAs to develop tariff free markets (e.g. ASEAN); especially focussing on the high volume, high impact products and markets</td>
</tr>
<tr>
<td>- Growing demand for fresh, convenient produce especially into Asian markets</td>
</tr>
<tr>
<td>- Continued orchard-level technological innovation and management improvement leading to increased yields, automated pruning, rain protection</td>
</tr>
<tr>
<td>- Production of New Zealand developed/IP controlled varieties in counter-seasonal regions</td>
</tr>
<tr>
<td>- Growth of nutraceuticals and functional foods; fruits as “superfoods”</td>
</tr>
<tr>
<td>- Potential for research into specific health effects of New Zealand blueberries</td>
</tr>
<tr>
<td>- Potential to utilise waste streams and convert them into high value products</td>
</tr>
</tbody>
</table>
Potential Investment Themes

- Growing production
- Supply chain efficiencies
- Improved marketing
- Value-added products
Four broad investment themes exist for driving export growth in the New Zealand blueberry industry

I. GROWING PRODUCTION
- Increase production to meet market demand

II. SUPPLY CHAIN EFFICIENCIES
- Drive down packing & logistics costs

III. IMPROVED MARKETING
- Engage more effectively with the consumer

IV. VALUE-ADDED PRODUCTS
- Add value to waste streams where it makes sense

- More land
- Longer shelf life
- Consistent messaging
- Select super-premium foods and beverages

- Higher yields & new varieties
- Reduced packing costs
- Embracing “Superfood”
- Select extracts, natural health products & nutraceuticals

- Increased under-cover
- More efficient logistics
- Driving Organic

Significant opportunities exist for industry to work together across these themes to share learnings and ideas, benchmark performance and co-ordinate activity, in particular in export focused regions.
As volumes increase, essential to gain access to key markets (e.g. China)
First, there are opportunities to grow blueberry production

<table>
<thead>
<tr>
<th>Situation creating opportunity</th>
<th>Potential investment theme</th>
<th>What you would need to believe</th>
</tr>
</thead>
</table>
| - New Zealand is a large country, similar in size to Japan, Italy or the United Kingdom, with a climate suited to temperate fruit  
- Currently only 640ha (0.003% of area) is planted in blueberries  
- Many peer group regions have more blueberry area: Georgia 7,416ha, Washington State 5,173ha, Oregon 4,955ha, Spain 3,722ha and France 2,393ha |  | - Additional land suitable for blueberries is available  
- Land and orchard establishment costs will deliver a competitive economic return  
- Export market demand exists to absorb more New Zealand blueberries  
- Increase in domestic demand to absorb non-export fruit |
| - Realised, real-world blueberry yields vary for a wide range of reasons, including genetics, management and systems  
- Yields vary across countries, regions and farmers  
- While NZ achieves acceptable yields, competing regions achieve as good or better yields  
- The average NZ blueberry grower achieved 3.8-4.8t/ha  
- Mature blueberry plantings in Peru achieve 15t/ha  
- Access to new varieties is limited, the quarantine process is lengthy and expensive (limited space, strict controls) | More land | - Yield is not a simple trade-off with quality  
- Orchard management skills for improving systems can be taught and spread  
- Higher yielding blueberry genetics exist in NZ or can be brought into the country through biosecurity barriers  
- New variety able to be breed for superior quality and large size |
| - Trend towards increased tunnel house/covered production of berries  
- Undercover opportunity to extend seasons, reduce fruit damage, increase quality, reduce bird losses | Higher yields & new varieties | - Orchard management, pest and disease management skills can be achieved  
- Capital available for increased investment  
- R&D and innovation available to succeed with new system |
Second, the supply chain can be improved to increase efficiency

I. GROWING PRODUCTION

II. SUPPLY CHAIN EFFICIENCIES

III. IMPROVED MARKETING

IV. VALUE-ADDED PRODUCTS

<table>
<thead>
<tr>
<th>Situation creating opportunity</th>
<th>Potential investment theme</th>
<th>What you would need to believe…</th>
</tr>
</thead>
<tbody>
<tr>
<td>- Blueberries have a short shelf life relative to some other fruit, for example more than raspberries but much less than apples</td>
<td></td>
<td></td>
</tr>
<tr>
<td>- NZ blueberries are mostly sold in NZ and Australia</td>
<td></td>
<td></td>
</tr>
<tr>
<td>- Refrigerated blueberries with controlled atmosphere (CO₂ &amp; Nitrogen) and a well-managed cool chain can last a month+</td>
<td></td>
<td></td>
</tr>
<tr>
<td>- Unlike other New Zealand fruit (e.g. kiwifruit, apples), blueberries are primarily air-freighted to Asia at a high cost</td>
<td></td>
<td></td>
</tr>
<tr>
<td>- Three major variable costs have the greatest effect on the total cost of packing blueberries: labour, electricity and packaging</td>
<td></td>
<td></td>
</tr>
<tr>
<td>- Packaging directly impacts both total shipping weight and fruit to packaging ratios, both of which are critical</td>
<td></td>
<td></td>
</tr>
<tr>
<td>- New Zealand has a large number of blueberry packhouses relative to crop size</td>
<td></td>
<td></td>
</tr>
<tr>
<td>- New Zealand blueberry packhouses achieve a low annual throughput relative to leading global competitors</td>
<td></td>
<td></td>
</tr>
<tr>
<td>- Total freight and logistics costs are a significant part of the final price of blueberries</td>
<td></td>
<td></td>
</tr>
<tr>
<td>- Airfreight is significantly more expensive than seafreight</td>
<td></td>
<td></td>
</tr>
<tr>
<td>- NZ fruit are mostly airfreighted to key markets beyond Australia</td>
<td></td>
<td></td>
</tr>
<tr>
<td>- Key S.H. competitors Peru and Chile, primarily use sea</td>
<td></td>
<td></td>
</tr>
<tr>
<td>- Airfreight is a significant part of the landed cost of New Zealand blueberries in Asian markets</td>
<td></td>
<td></td>
</tr>
<tr>
<td>- Controlled atmosphere (CA) shipping can work for NZ blueberries</td>
<td></td>
<td></td>
</tr>
<tr>
<td>- CA does not impact quality significantly</td>
<td></td>
<td></td>
</tr>
<tr>
<td>- Post harvest management and systems impact shelf life</td>
<td></td>
<td></td>
</tr>
<tr>
<td>- Plant genetics can influence shelf life; new breeds could be developed with longer shelf life?</td>
<td></td>
<td></td>
</tr>
<tr>
<td>- Longer shelf life</td>
<td></td>
<td></td>
</tr>
<tr>
<td>- Reduced packing costs</td>
<td></td>
<td></td>
</tr>
<tr>
<td>- More efficient logistics</td>
<td></td>
<td></td>
</tr>
<tr>
<td>- Unit packaging costs are cheaper for larger orders/at scale</td>
<td></td>
<td></td>
</tr>
<tr>
<td>- Packaging is not purely a trade-off between rigidity/strength and weight; it is possible to be lighter and stronger</td>
<td></td>
<td></td>
</tr>
<tr>
<td>- Larger packhouses have lower costs per unit than smaller businesses</td>
<td></td>
<td></td>
</tr>
<tr>
<td>- Further industry consolidation would improve relative scale economics and competitiveness</td>
<td></td>
<td></td>
</tr>
<tr>
<td>- Key firms in key regions would be willing to merge</td>
<td></td>
<td></td>
</tr>
<tr>
<td>- Opportunities exist to improve speed and increase industry coordination to reduce net freight cost per kilogram</td>
<td></td>
<td></td>
</tr>
<tr>
<td>- Opportunities exist to increase the efficiency of logistics in local trucking (e.g. full trucks, return loads)</td>
<td></td>
<td></td>
</tr>
<tr>
<td>- For exports, Chile works with shipping lines to (1) reduce shipping times by 5 days (to 22-25 days), (2) have last minute loading and (3) get priority unloading on arrival in Asia; this could work for NZ</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
# Third, the marketing of New Zealand blueberries can be improved

## I. GROWING PRODUCTION

- NZ blueberries represent “a drop in the ocean” of total Asian fruit consumption; in this environment, achieving “cut through” and getting the attention of the consumer is very difficult
- In Asia, key competitors Chile and Peru have significantly larger market share and in-market presence or “shelf weight”
- Current messaging in key markets on NZ blueberries is fragmented with multiple messages
- Blueberries can learn from other sectors who show a common industry story, brand, quality mark or slogan

## II. SUPPLY CHAIN EFFICIENCIES

- Part of the growing demand for blueberries is driven by its status as a superfood
- Superfoods are nutritionally dense foods that are widely recognised as good for health
- The concept of superfoods has both strong and growing scientific support and growing consumer demand
- While there is no “official list”, blueberries are effectively on every superfood list everywhere
- Domestic NZ consumption of blueberries is growing, but most consumption growth is coming from frozen imports

## III. IMPROVED MARKETING

- NZ reputation for clean green suits organic blueberries
- Current Australian phytosanitary regulations are severe inhibiting exports of organic fruit
- Growing demand for organic blueberries (Countdown and Foodstuffs established organic home brand in FY19)

## IV. VALUE-ADDED PRODUCTS

- Consumer demand for organic blueberries has potential for further growth in domestic and export markets
- Organic blueberries achieve a premium in the market
- New Zealand can produce organic berries at competitive prices
- Review of phytosanitary regulations allows for organic blueberry exports to Australia

</table>
| - There is strong demand across all key Asian markets for New Zealand premium and super-premium foods and beverages  
- Premium/super-premium foods and beverages are often given as gifts (e.g. French Cognac)  
- Gift shops, souvenir shops, and duty-free shops are major outlets for super-premium foods and beverages | Select super-premium foods and beverages | - Select foods and beverages that use blueberries as an ingredient (e.g. liqueurs, liqueur-filled chocolates, powdered and freeze dried blueberries) can be made from NZ processing grade/export-reject fruit  
- Products could be differentiated such that they could demand a premium  
- NZ firms have the marketing skills to deliver on super-premium items |
| - Often in highly competitive food sectors, successful firms are those that best monetise their waste streams  
- There is growing demand for natural health products and supplements, both in the Western world and East Asia  
- Most nutraceuticals are, in practice, value added to existing waste streams (e.g. calcium, green tea)  
- New Zealand has proven capabilities in nutraceutical science R&D, product development and production (e.g. manuka honey, green lipped mussel extract)  
- There is a growing body of research linking blueberries to various positive health benefits  
- The NZ blueberry industry generates a wide range of waste streams, including skins, pits, bark and leaves) | Select extracts, natural health products & nutraceuticals | - It is possible to extract and market New Zealand blueberry extracts as nutraceuticals  
- Research supports that NZ blueberries are higher in health giving benefits than some other sources  
- New Zealand blueberry extracts can compete in a global market  
- New Zealand blueberry extracts can create a point of difference such that they can command higher prices than competitors |
Blueberries are an extensible platform
New Zealand

Includes estimates
The New Zealand blueberry industry needs different strategic priorities for each key market segment

NEW ZEALAND DOMESTIC MARKET

- Position as premium
- Expand usage

- Increase per capita consumption
- Suggest more usage occasions
- Embrace healthy, superfood status
- Sell the breakfast smoothie
- Leverage shift to plant-based diets
- Maintain domestic biosecurity

AUSTRALIAN MARKET

- Position as premium
- Expand usage

- Suggest usage occasions
- Work with NSW growers to increase per capita consumption
- Work to improve efficiency of Australian border biosecurity processes
- Ensure Australia maintains high biosecurity requirements

EAST & SE ASIAN MARKETS

- Position as premium
- Expand usage

- Ensure best leverage of FTAs
- NZ needs to negotiate market access with GACC
- Develop awareness
- Suggest usage occasions
- Improve access
- Grow per capita consumption of imported blueberries in seasonal window
- Position NZ as luxury/super-premium

*E/SE: East/South East; **Free Trade Agreements; ^GACC General Administration of Customs of the People’s Republic and China; Source: photo credit (purchased or creative commons (Dollar Photo Club; freenzphotos.com))
First, there are continued opportunities for growth in the New Zealand domestic market
Domestic fresh demand appears relatively stable (~1,600t) and exports are absorbing production growth.

NEW ZEALAND BLUEBERRY CROP DISPOSITION
Model; tonnes; 1996-2019

1. Processing assumes a constant 10% of the crop to processing; 2. Calculation is “apparent disappearance” (production less exports); Source: Statistics NZ, UN FAO, Plant & Food Fresh Facts; Coriolis estimates and analysis.
New Zealanders are consuming more blueberries, but demand growth is coming from imported frozen fruit

APPARENT PER CAPITA CONSUMPTION OF BLUEBERRIES IN NEW ZEALAND$^2$
Grams per person; 1996-2019

1. Processing assumes a constant 10% of the crop to processing; 2. Calculation is “apparent consumption” (production plus imports); 3. Some unmeasurable amount of this volume will be exported as a processed product; Source: Statistics NZ; UN FAO; Plant & Food Fresh Facts; Coriolis estimates and analysis
With relatively flat domestic demand for fresh blueberries, New Zealand needs to look to exports for growth.
New Zealand blueberry export volumes are highly seasonal

NEW ZEALAND BLUEBERRY EXPORT VOLUME BY MONTH
Tonnes; Jan 1988-Jan 2020

Source: Statistics NZ; Coriolis analysis
Export seasonality has shifted away from predominantly Dec/Jan to predominantly Feb/Mar

SHARE OF NEW ZEALAND BLUEBERRY EXPORT VOLUME BY MONTH BY YEAR
% of tonnes; YE June Jul 1988-Jun 2019

Source: Statistics NZ; Coriolis analysis
New Zealand’s market share varies significantly by market; it is high in Oceania, reasonable in parts of SE Asia and low elsewhere.

Competitive Situation

- Global situation
- Key competitors
- Peru
- Chile
The global market for blueberry imports is dominated by North America and Europe, with China as a major growth region\(^1\)

GLOBAL BLUEBERRY IMPORT VALUE BY RECEIVER
US$m; as reported CIF; 1998-2018

Currently, New Zealand does not participate in any of the major global markets for blueberries

---

1. However, US demand grew more in the last year (17 to 18) than total Chinese demand has in the last 20 years; Source: UN Comtrade; Coriolis analysis and classifications
Global blueberry exports are growing (20y CAGR 18%), driven in particular by Chile and Peru

GLOBAL BLUEBERRY EXPORT VALUE BY SENDER
US$m; as reported FOB; 1998-2018

1. Of imported South American fruit inseparable at source; Source: UN Comtrade; Coriolis analysis and classifications
This section looks at the two largest blueberry exporters for lessons for New Zealand; first, Peru...
Peru — a country that has grown rapidly over the past decade to become the largest blueberry exporter in the world — has clear lessons for New Zealand

1. Six major factors are driving Peru’s strong growth in blueberries; does New Zealand have all of these?

2. To point out the obvious, growing exports requires growing area and growing yields
   - Peru has rapidly growing blueberry area and yields, leading to rapidly growing production
   - Peru has translated growing blueberry production into growing blueberry exports
   - Peru’s blueberry exports peak in October, earlier than Chile (or New Zealand)
   - Peru’s growing blueberry exports have gone to North America, Europe and China/Hong Kong

3. New Zealand needs fewer, larger operators achieving much higher yields
   - Peru has a highly consolidated industry made up of large operators at scale
   - An examination of the financial results of Camposol shows that Peru’s growth is being driven by economies of scale and profit
   - Comparing Camposol with the New Zealand blueberry industry, highlights the lack of scale and low yields currently
Six major factors are driving Peru’s strong growth in blueberries

This section looks at the two largest blueberry exporters for lessons for New Zealand; second, Chile...
Chile is a growing producer and exporter that has put pressure on New Zealand in many Asian blueberry markets

- Chile is growing blueberry area, yields and production
- Chile has growing blueberry export volumes and values
- However, the growth of Peru has put pressure on prices
- Similar to New Zealand, Chile’s blueberry exports peak in the Southern Hemisphere mid-summer (Jan)
- Chile’s growing fresh blueberry exports have gone to North America, Europe and China/Hong Kong
- Chile has a relatively consolidated blueberry industry
Chile is growing blueberry area, yields and production

**CHILE BLUEBERRY AREA**

Ha; 2003-2019

**CHILE BLUEBERRY YIELD**

T/ha; 2005-2019

**CHILE BLUEBERRY PROD.**

T; 2005-2019

Note: Chile does not report fresh “production” to the FAO; what is here is a synthesis across a wide range of sources (which are inconsistent and disagree in places); this does not fully account for total production including frozen blueberries (effectively “export grade”); Source: various published articles; Coriolis analysis and estimates
Chile has growing blueberry export volumes and values; however, the growth of Peru has put pressure on prices.

Firm Activity & Profiles

- Firm Themes
- Key Firm Profiles
As the industry develops, firms are integrating across and between the supply chain

INVESTMENT ACROSS THE BLUEBERRY SUPPLY CHAIN
Model: 2020

- **GENETICS**
- **IMPORTS**
  - Primarily frozen, some concentrate
- **PACKHOUSES**
  - Aggregation, Grading, Packing
  - Often in conjunction with other fruit
- **FURTHER PROCESSING**
  - Jam, juice, flavouring, ice cream, etc.
- **SALES & MARKETING**
- **EXPORTS**
  - Australia
  - Asian & Other Markets

Source: Coriolis
Firms are investing in growth across the supply chain

BLUEBERRY INVESTMENTS: EXAMPLE

<table>
<thead>
<tr>
<th>ORGANISATION</th>
<th>DETAILS</th>
</tr>
</thead>
</table>
| BLUEBERRY INVESTMENTS | - Developing 220 ha farm in Southland orchard, over time land being developed and production increasing; in 2019 40% acreage in grass  
- Adding to existing 160ha acreage in North Island |
| T&G | - 2011-2013 planted 30ha of blueberries in Kerikeri, 55,000 plants will produce +300 tonnes of fruit when in full production in 2021; invested in dedicated packhouse facility, planted four new varieties and launched ENZABlue Brand  
- 2017 license holder of 16 proprietary blueberry varieties in Australia; agreement between T&G and P&F Research  
- 2020 new partnership with P&F Research to breed new blueberry varieties  
- 2020 new JV relationship with CarSol (worlds largest berry producer), enabling year-round supply into Asia under “Orchard Rd” brand |
| MAUNGATAPERE | - 2015 began investing in hydroponic berryfruit (raspberries, blackberries)  
- 2019 invested in 4ha of hydroponic blueberries in Northland  
- Received Provincial Growth Fund funding ($2.37m) to further develop hydroponic berryfruit opportunities in Northland, and develop training resources in Northland. Looking to expand orchard a further 20ha. |
| Plant & Food RESEARCH | - Investing in new plant varieties to: improve yield, disease resistance, taste, early and late season fruit |

Source: company websites, company annual reports, press articles
Large firms like T&G are developing blueberries as a strategic category

**BACKING BLUEBERRIES**

“Emerging categories have a strong future, with the strategic goal of maintaining an advantage over global competitors and supplying high quality, premium blueberries and grapes 365 days of the year in key markets around the world... This year, the Company made great progress with its emerging blueberry category, bringing together genetics, growing, partnerships and the aggregation of its markets and brands. Discussions commenced with potential grower partners in the United States, Australia and South America, with the view to establishing strategic sourcing partnerships. The Company’s Orchard Rd brand was successfully rolled out to new markets across Asia, including Singapore and China. And in June 2019, T&G was one of the first companies to service the newly opened Vietnamese market out of the United States, with its Orchard Rd blueberries. The Company has continued to commercialise its blueberry genetics as part of its partnership with Oregon-based Fall Creek Farm & Nursery, and Plant & Food Research in New Zealand. This programme is looking to provide Australian consumers with high quality, locally-produced blueberries at different times of the year – thereby helping extend the availability of blueberries in Australia. In 2020, T&G will continue to build-out its blueberry category with further partnerships throughout its supply chain.”

*T&G Annual Report, 2019, pg20*

“Harnessing our vertical model strengths to develop two new categories – blueberries and grapes...We see a strong future for these emerging categories.”

Gareth Edgecombe (CEO)
T&G

Source: T&G Annual Report, 2019
Bay of Plenty, Hawke’s Bay and Waikato are the primary growing regions, with growth in Northland and the South Island.
